Fazeysburg, OH 43822

Customer ID: **10406**  
Certificate: **31-B-0166**  
Site: 001  
ANTON F HASH

Type: ROUTINE INSPECTION  
Date: 25-SEP-2015

### 2.126(a)

#### ACCESS AND INSPECTION OF RECORDS AND PROPERTY; SUBMISSION OF ITINERARIES.

\*\*\*Inspectors were not able to complete a full inspection on 25 September at 3:00pm. A facility representative was able to allow inspectors to see the majority of the animals; however, at least 6 foxes were visible but unable to be inspected more closely because they were in an area that also contained an unfriendly dog. The owner stated later on the phone that the dog was in this area (rather than freely roaming the property) because he "didn't want him to bite the UPS man." Additionally, the facility representative did not have access to any of the required records, nor did she know anything about the facility's operations. An incomplete inspection process is not in compliance with the AWA. APHIS officials must be allowed to inspect all animals, facilities, and records, and be accompanied by a responsible and knowledgeable adult available for inspection at least three hours per day, three days per week Monday-Friday between 7am-7pm.

Correct from this point forward.

### 3.131(a)

#### SANITATION.

\*\*\*The majority of the enclosures containing skunks and foxes are excessively dirty, with piles of feces growing mold and spilled feed on the ground of ground-level enclosures. Dirty conditions cause discomfort to the animals if they cannot escape contamination and odor; they also attract pests which can transmit infectious disease to the animals contained therein. Correct by removing excreta and spent feed as often as necessary to prevent contamination of the animals and minimize disease hazards and odors.

Correct by: 29 September 2015

### 3.131(c)

#### SANITATION.

\*\*\*The premises in general is littered with feces from free-roaming animals (a large number of birds and a miniature horse). Additionally, the ground beneath elevated primary enclosures is contaminated with piles of feces and spilled feed. These accumulations of organic matter cause odors and attract pests, which in turn cause discomfort and can

---

transmit disease to the covered animals. Correct by keeping premises including buildings and grounds clean to protect the health of the animals.

Correct by: 9 October 2015

### 3.131(d) REPEAT

#### SANITATION.

\*\*\*The premises as a whole is infested with flies, such that inspectors were continuously swatting flies away during inspection. It was also noted that the deer were continuously swishing their tails to keep flies off. This degree of fly infestation causes discomfort to the animals, as well as poses a risk of disease transmission to the animals. Correct by establishing and maintaining a safe and effective program for the control of pests (including insects, ectoparasites, avian and mammalian pests).

Correct by: 9 October 2015

This inspection was conducted on 25 September with a cousin of one of the owners by Michael Neafsey, VMO, and Kathy Campitelli, VMO.

An exit interview was conducted on 28 September with the owner by Kathy Campitelli, VMO, and Shannon Sebera, ACI.

#### Additional Inspectors

Neafsey Michael, Assistant Director

Sebera Shannon, Animal Care Inspector
