Type: ROUTINE INSPECTION
Date: 19-APR-2021

3.25(a) Repeat

Facilities, general.

Although the side walls of the enclosures measured approximately 7 inches in height, during the inspection, one guinea pig was observed to be out of the enclosure and running around on the floor of the building.

Guinea pigs that have escaped their enclosure could be at risk of injury or escape from the barn as well as the inability to access food and water.

The enclosure must contain the animals. The licensee must ensure that the enclosure contains the animals at all times and does not allow them to escape.

3.28(a)(1)

Primary enclosures.

One of the guinea pig enclosures (Pen 34 housing 36 guinea pigs) had an approximately 6 inch area of the side wall where the wires were bent creating an opening with sharp points.

Wires with sharp points along enclosures can cause injury to the guinea pigs and can lead to escape if the enclosure walls are not high enough to contain the animals.

Primary enclosures must be structurally sound and maintained in good repair to protect the guinea pigs from injury.

Inspection Report

3.31(b)

Repeat

Sanitation.

There was a large amount of discarded bedding, hay, and debris on the floor under and around the guinea pig pens.

The lack of sanitation and presence of debris may attract pests into the room, result in unpleasant odors, and may contribute to spread of disease.

The buildings used for housing animals must be kept clean and in good repair to protect the animals from injury and to facilitate prescribed husbandry practices and maintain the health of the animals.

This inspection and exit interview were conducted with the facility representative.
