JOHN AND LYLE RENNER

Type: ROUTINE INSPECTION
Date: 13-FEB-2014

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Four dogs were observed to have swollen sores on the tops of their feet between toes that were red, raised, and hairless. The following dogs were affected on the following feet:

- A husky (USDA tag #363), on both hind feet; this dog was observed to have a mild limp on the right rear leg.
- A rat terrier microchip #0A01390618, on the right rear foot.
- A rat terrier microchip #0A01386333, on the right front foot.
- A beagle microchip #0A01574727, on the right front foot.

These dogs have not had any type of treatment. Swollen sores like these can be painful and can get worse if not treated correctly. These dogs must be provide adequate veterinary care to address these issues. Treatments must be guided by the attending veterinarian.

2.40(b)(3) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Four dogs had foot sores that were identified by inspectors that had not been identified previously by licensees. These four dogs were observed to have swollen sores on the tops of their feet between toes that were red, raised, and hairless. The following dogs were affected on the following feet:

- A female husky (USDA tag# 363), on both hind feet; this dog was observed to walk with a mild limp on the right rear leg.
- A rat terrier microchip #0A01390618, on the right rear foot.
- A rat terrier microchip #0A01386333, on the right front foot.
- A beagle microchip #0A01574727, on the right front foot.

Thorough observations of animals must be made daily so that anything abnormal can be addressed promptly. Health problems in animals must be communicated to the attending veterinarian promptly. Licensees must develop

Inspection Report

a method of daily observations to help promote the health and wellbeing of all animals at the facility.

3.1(c)(1)(2)

HOUSING FACILITIES, GENERAL.

Two enclosures in the back nursery room had broken wires on a section of the floor panel. This exposes sharp points that dogs could possibly contact. Sharp points could injure dogs. Maintain surfaces that dogs contact free from sharp or jagged edges.

Correct by 2/16/14.

3.2(b)

INDOOR HOUSING FACILITIES.

Ventilation.

The green building and the nursery building were observed to have a strong ammonia odor throughout inspection. Exhaust fans were not running when we entered the buildings and were turned on when we mentioned the ammonia odors to the licensees. We noted a burning sensation in our throats in both buildings and in the nursery our eyes also felt a burning sensation. This suggests that ammonia levels in these areas are too high. High ammonia levels can make animals sick. For the animal's health, more fresh air-flow must be provided while maintaining appropriate indoor temperatures.

Correct and maintain adequate ventilation (decrease ammonia odors) by 2/17/14.

Inspection conducted with licensees on 2/13/14. Exit interview conducted with licensee via phone on 2/14/14.
