Type: ROUTINE INSPECTION

Date: 26-JAN-2015

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Kinkajou # 91C068 did not receive the January 2015 monthly dose of Ivermectin for heartworm prevention. According to the medical records that were reviewed, the keeper unilaterally decided not to give this medication because the animal was receiving another medication at the time. This was not discussed with the attending veterinarian to determine if the 2 medications can, or cannot, be given safely simultaneously. This medications was not administered to this animal for January 2015 (to date).

The medical records also do not indicate that another kinkajou (#94C080) was given its' Ivermectin for the month of December 2014, as well as 2 additional kinkajous and two servals who also did not receive this medication for the month of June 2014. It is unknown whether these animals had, or had not, received the Ivermectin for the months indicated.

For this medication to be effective in preventing Heartworm disease it should be administered on the same day of each & every month. Inform your veterinarian that these animals did not in one case (and may have not have in the other cases) receive their heartworm prevention medication for the months indicated, and ensure that all animals receive their medications as per the veterinarian's instructions.

Correct immediately.

3.125(a)

FACILITIES, GENERAL.

The walls of the giraffe barn have many exposed screw points below the horizontal I beam that runs around the barn walls. The giraffes are tall enough to potentially have contact with these sharp points, as evidenced by some brownish discoloration under the I beam in one area caused by the animal(s) rubbing against it.

These screws were sharp and can potentially injure these animals if they should brush up against the walls where the screws are.

Inspection Report

The barn shall be constructed of such materials to protect the animals from injury. There shall be no sharp objects that can potentially injure the animals that are used in construction.

Correct by February 14, 2015

3.125(b)

FACILITIES, GENERAL.

The zoo's cheetah enclosure consists of an 8 foot high fence with a 28 inch kick in. The zoo received approval to house the cheetahs in this enclosure. On the day of the inspection of the enclosure, the electrical wire solar panel box was not operational as evidenced by the "OK" light not being on (and no sounds emanating for it).

This electrical wire which is strung around the upper portion of the fence serves as additional security to ensure that these cats are contained within their enclosure.

Reliable electrical power is required to comply with the other provisions of this subpart (to contain the animals). Examine the solar panel box and batteries to determine the cause of the power failure and repair as needed.

Correct by January 30, 2015

3.131(c)

SANITATION.

The floor in the immediate area of the entrance to the commissary is dirty and covered with mud that is being tracked in by the employees. There is a mat located at the entrance but this appears to be ineffective in preventing mud coming in from the employees boots/shoes.

All food prep areas shall be maintained clean to prevent bacterial and other contaminations, as well as to facilitate the prescribed husbandry practices. A method of preventing dirt/mud from entering the food prep area on employees boots/shoes shall be implemented.

Correct by January 28, 2015

The exit interview was conducted with the VP of Operations, interim CEO, and the Curator.

Inspection performed January 26th, 27th, 28th, 2015
