Type: FOCUSED INSPECTION

Date: 22-FEB-2024

3.127(d)

Repeat

Facilities, outdoor.

The facility perimeter fence does not meet the 8 foot requirement for dangerous animals including black bear.

** Black bear are housed in a primary enclosure at the southwest corner of the park. The primary enclosure is comprised of a chain-link interior fence of varying height. A solid retaining wall sits 3.5 feet beyond the primary enclosure. From the public side of the retaining wall, the public may look over the top and down into the exhibit to view the bears. The retaining wall from the side of the bear enclosure is 8 feet 9 inches in height however it is only 3 feet 3 inches in height from the public side of the wall. According to facility officials the retaining wall acts as the "bear perimeter fence" while a 6 foot chain-link perimeter fence around the greater park boundary acts as the perimeter fence for the remainder of the facility.

** Additionally, at the southern end of the public viewing area, where the primary enclosure fence meets a taller 8 foot section of "bear perimeter fence", there is a segment of chain-link as well as a metal pole positioned transversely between the primary enclosure fence and the perimeter fence – functionally creating one structure and eliminating the minimum 3 foot distance between the two barriers required by the AWA.

The perimeter fence must meet the minimum required height on both sides of the fence: 8 feet for dangerous animals including black bear. Correct by ensuring the perimeter fence is in good repair and of sufficient height to restrict access by unwanted animals and unauthorized people and to also act as an effective secondary containment system for animals in the event they escape their primary enclosure. Also ensure that the perimeter fence is no less than 3 feet away from the primary enclosure as described in section 3.127 of the AWA.

3.154

Environment enhancement to promote psychological well-being.

The facility does not have a complete, written environmental enhancement plan for birds as is required by the AWA. An environmental enhancement plan must be developed, documented, and approved by the attending veterinarian so as to promote the health and psychological well-being of birds.

Correct by ensuring that a complete, documented plan for environmental enhancement, that addresses the required elements approved by the attending veterinarian, is maintained and available for inspection. Correct by May 15, 2024.
