Type: ROUTINE INSPECTION
Date: 18-FEB-2016

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***In the small sheltered facility, there was a male English Bulldog identified as Louie #482C5E6B05 that had an open wound on the right side of his neck. This dog has been examined on February 8, 2016 by a veterinarian, written instructions included treatment and a plan for a follow up visit to the veterinarian for fourteen days post exam. The instructions by the veterinarian included antibiotic treatment with Cephalexin 500mg (20 pills) twice daily. The bottle of Cephalexin handed to the inspectors by the facility representative still had ten pills inside. The licensee stated that there had been another bottle of the antibiotic at the facility and that the medication had been given to Louie twice a day for either five or seven days.

According to the veterinarian's instructions, this dog should have had the full bottle (20 pills) of Cephalexin as of today, February 18, 2016. Not following the directions of a veterinarian can lead to worsening the condition or an extended healing period. The licensee must follow the instructions given by the veterinarian and assure that all of the regulated animals are provided with adequate veterinary care as required.

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

***The dogs on hand records reflected 24 animals in the facility. The actual count reflected 44 animals. The facility representative stated that 19 dogs were purchased last month and had not been added to the records. Appropriate documentation of acquired animals is essential for proper identification and each animal must be able to be traced forward and backward. The licensee must update and complete the inventory and assure that all records are maintained as required.

To be corrected from today, February 18, 2016 forward.

3.1(e) REPEAT

HOUSING FACILITIES, GENERAL.

(e) Storage.

***In both of the sheltered facilities the opened food supply was in containers, yet one of the lids was down inside the container. The other food container had a lid, yet it the container was full and the scoop used to feed with prevented the lid from fitting the container appropriately. Food that is left open and is stored on the floor creates

Inspection Report

opportunity for pests and contamination. The licensee must assure that opened food and bedding are stored in containers with tight fitting lids.

3.6(a)(2)(2) REPEAT

PRIMARY ENCLOSURES.

***In the outdoor portion of the sheltered facility, there were two enclosures containing four adult dogs that had sharp points. There were screws used to attach the lower hinge to the gate that were protruding into the enclosure. These screws had been cut off, yet still had sharp edges on them. There was also bailing wire on the fences that was protruding into the enclosures. In the small sheltered facility, there was a nail head that was sticking out just above the shoulder of the dogs within the enclosures. Sharp points and edges create a potential injury for the animals within the enclosure. The licensee must assure that there are no sharp points or edges in the primary enclosures as required.

This inspection began at 1055.

The inspection and exit conference were conducted with the facility representative, Konnie Plumlee, VMO and Beverly Hicks, ACI.

End of report.
