Certificate: **55-R-0004**

Site: 001

DIVISION OF LABORATORY  
ANIMAL MEDICINE

Type: ROUTINE INSPECTION

Date: 07-OCT-2024

---

### 2.31(c)(7)

#### Institutional Animal Care and Use Committee (IACUC).

Changes were made to a protocol regarding the selection of animals used without IACUC review and approval. The protocol states that it will use female Oncopigs; however, on inspection, three male pigs were identified at the facility currently on that protocol. Making significant changes to protocols without IACUC review and approval deprives the IACUC of the opportunity to provide oversight of animal activities and compliance with the Animal Welfare Act. Correct by 30 October 2024 by ensuring that animal activities are accurately and completely described so that the IACUC can have oversight as required by the Animal Welfare Act regulations.

### 3.10(a)

#### Watering

An adult male dog was not offered continuous access to potable water for 3 days due to a water line issue, however the dog still received its minimum daily requirements for water through other means. The facility found the issue and self-reported to OLAW. Upon discovery of the water line malfunction, the dog had no signs of dehydration on evaluation from a veterinarian. Not having water continuously available may negatively affect the health and well-being of the dog. Correct by 16 October 2024 by ensuring all dogs have continuous access to potable water unless restricted by the attending veterinarian. The facility took measures to correct the issue immediately upon finding the dog.

This inspection and exit interview were conducted with facility representatives.
