SALISBURY ZOOLOGICAL PARK

Type: ROUTINE INSPECTION
Date: 20-MAR-2019

2.40(b)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Two situations occurred that impacted the health of the animals from the lack of appropriate handling equipment. These animals could not be captured or controlled for routine examination and treatment. The facility stated that the only means of capture for the llama was by darting to sedate the animal involved in the situation. The facility stated that the one adult male llama, and two prairie dogs could not be captured and evaluated in a safe manner.

A wound on an adult male llama was not discovered in a timely manner. The shearing had not taken place for the year, but was scheduled to be done. The wound of unknown size was located on the sternum and was observed to be draining. During treatments the wound became necrotic. After 17 days of treatment at the onsite treatment center, the animal was euthanized due to the severity of the wound.

There is a prairie dog enclosure that housed two prairie dogs. The enclosure design prevents routine evaluation of animal's health and well-being. The two prairie dogs retreated into their burrows for the winter without evaluation of their health status and have not been observed since.

The lack of appropriate equipment to handle and control the animals for maintaining their health and perform normal husbandry practices does not allow for proper care of the animals. The facility personnel has started integration of new training, capture, and handling of new animals to the facility. The exhibitor shall establish and maintain programs of veterinary care that include the availability of appropriate facilities, personnel, equipment, and services to comply with the provisions of this section.

Correct by date: March 25, 2019

This inspection and exit interview were conducted with a facility representative.
