Bethany, MO 64424

Customer ID: **38097**
Certificate: **43-A-4959**
Site: 001
BETH NIBLE

Type: ROUTINE INSPECTION
Date: 11-FEB-2015

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

* *A longhair male Dachshund "Opie" (#985112002555721) has a right eye that is cloudy with a thin to thick green colored discharge. There is crusty dark material along the lower eyelid. His upper back teeth on the right side are also completely encased in a thick grey- white colored material. The canine teeth also have a build up of brown material on them. This type of material is on both sides of the mouth, covering the teeth and the gums on both sides have receded to expose tooth root. The right side of the muzzle below the eye appeared swollen, and there is also a foul odor coming from his mouth. The licensee had not noticed the eye issues, swelling, nor the foul odor from the mouth until mentioned by the inspectors. She had not yet scheduled a dental cleaning but had noted the build up on the teeth. The discharge coating the eye may be indicative of infection, injury or other medical condition. The build up of material on the teeth and foul odor may be indicative of dental disease or other medical condition. These conditions can be painful, cause stress, reduce nutrition intake and affect the overall health of the dog. Licensee must have this dog evaluated by the veterinarian, obtain a diagnosis and treatment plan, retain documentation of such information and have readily available for review upon request by the inspector.

* To be corrected by: 2/12/15

** A King Charles Cavalier (#46575C2D00/985112002555058) has a right ear that is matted along the underside of the ear and around the ear canal. There is a dark gooey, thick, gummy discharge that is entangled in the matted hair. There is also a foul yeasty- type smell emitting from the ear. This smell and discharge can be indicative of infection, disease, parasites, other medical issues and may be painful. Licensee must have this dog evaluated by the veterinarian, obtain a diagnosis and treatment plan, retain documentation of such information and have readily available for review upon request by the inspector.

* To be corrected by: 2/14/15

** A Yorkshire Terrier (# 102 024 336) has dense, tight matted hair that is pulling the skin along numerous areas of the belly, legs, and chest. This matted hair offers no protection against the elements, can cause skin irritation and may be painful. Licensee must establish and maintain a method of removing matted hair to ensure that movement

of the dog is not restricted, does not cause pain, allows the hair coat to maintain healthy skin and protect the dog from the elements.

* To be corrected by: 2/17/15

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

Cleaning.

** In four enclosures (containing 8 dogs total) accumulations of dirt, feces and hair were wound around and frozen in the corners of the outdoor portion of the enclosure. These types of accumulations can harbor disease organisms, soil the dogs and attract pests. Licensee must remove any accumulated material, spot clean daily or as often as necessary to reduce disease hazards to the dogs.

* To be corrected by: 2/13/15

Inspection and exit interview conducted with facility representative.
