

Inspection Report

HENRY HAMPTON
14235 HWY 801
MOUNT ULLA, NC 28125

Customer ID: **3271**
Certificate: **55-B-0069**
Site: 002
LAZY 5 RANCH

Type: ROUTINE INSPECTION
Date: 23-AUG-2023

2.131(c)(1)

Handling of animals.

***USDA observed 6 customers in the horse barn interacting with three calves and three sheep. There were no attendants monitoring the interactions and no barriers present to prevent the customers from making unsupervised contact with the animals.

***Several of the birds (pigeons, quail, chicken) enclosures do not have an adequate barrier fence to prevent public access to the enclosures. There are currently post and rope type fences present that may allow a customer to easily step over or children to crawl under and access the enclosures.

During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

Correct by August 31, 2023

2.134

Contingency planning.

***The contingency plan developed is incomplete.

The contingency plan must identify situations the facility might experience that would trigger an emergency response such as electrical outages, faulty HVAC systems, fires, and animal escapes, as well as natural disasters the facility is most likely to experience.

The plan shall outline specific tasks required to be carried out in response to the emergencies or disasters such as detailed animal evacuation instructions or shelter-in-place instructions and provisions for providing backup sources of food and water as well as sanitation, ventilation, bedding, veterinary care, etc.

The plan shall identify a chain of command and who (by name or by position title) will be responsible for fulfilling these

Inspection Report

tasks.

The facility must provide training for its personnel regarding their roles and responsibilities as outlined in the plan within 60 days of putting the plan into place.

Correct by September 30, 2023.

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

***Several of the small bird enclosures in the walkthrough portion of the park have accumulations of excreta on top of their nest boxes and perches. There are also cobwebs in the top areas and corners between the nest boxes and limbs indicating the enclosures have not been recently cleaned. Allowing these accumulations increase and attract the presence of insects that increase problems of pest control and disease hazard.

Excreta and food waste must be removed from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulation of feces and food waste, to prevent soiling of the birds contained in the primary enclosures, and to reduce disease hazards, insects, pests, and odors.

Correct by August 31, 2023

This inspection and exit interview were conducted with the Licensee.
