ARBUCKLE ADVENTURES, L L C

Type: ROUTINE INSPECTION

Date: 27-JAN-2025

3.127(d)

Repeat

Facilities, outdoor.

In the drive through area of the park there are several areas of the perimeter fence which are in need of repair. The perimeter fence near the giraffe enclosure is incomplete and has a wide gap which potentially allows direct access to the giraffe enclosure. A creek channel in the drive through section near the camel area is fenced with panels which are approximately six feet high and constructed with gaps that would allow passage of animals or unauthorized persons through the gate. The perimeter fence from the drive through entrance to the hyena enclosure is not of sufficient height to meet AWA requirements and is not currently maintained in adequate condition. A gate in the perimeter fence next to the giraffe enclosure is not of sufficient height to meet requirements. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. Facilities housing potentially dangerous animals must have a fence at least 8 feet in height. These requirements apply to all sections of the fence, including gates.

3.131(a)

Sanitation.

In an indoor enclosure housing two red kangaroo, there was an excessive accumulation of feces and waste covering the floor area. This is a potential source of contamination to the enclosed animals. Excreta and feces shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors. The licensee is to ensure that an adequate cleaning and sanitization schedule is maintained at all times.

Corrected at the time of the inspection.

In an indoor housing area for a common eland, there was an excessive accumulation of feces and waste covering the floor area. The animal could not enter the housing area for feed and water without coming into contact with the feces and waste. Excreta and feces shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors. The licensee is to ensure that an adequate cleaning and sanitization schedule is maintained at all times.

Corrected at the time of the inspection.
