Certificate: **48-A-2212**
Site: 001
MERRY GUMM

Type: ROUTINE INSPECTION
Date: 10-MAY-2018

2.50(a)(2)

TIME AND METHOD OF IDENTIFICATION.

Several weaned puppies from separate litters are being housed together in the same primary enclosures. Co-mingling of separate litters can complicate individual animal identification. Puppies from separate litters housed together must be individually identified. Correct by 17 May 2018.

2.50(a)

TIME AND METHOD OF IDENTIFICATION.

At least 9 adult dogs (and several puppies older than 16 weeks of age) do not have official identification tags. Identification tags aids in the tracking of animals. All dogs and puppies older than 16 weeks of age shall be officially identified at all times. Correct by 17 May 2018.

3.11(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

There is an accumulation feces in at least three of the outdoor enclosures. There was an odor of feces in one of these enclosures. When feces are allowed to accumulate they attract insects/pests, contribute to odors, soil the animals, and can facilitate the spread of diseases. The applicant must remove excreta and food waste from primary enclosures daily. Correct by 11 May 2018.

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Numerous food receptacles had debris/dirt caked on the interior surfaces in contact with the food. Dirty food receptacles can lead to contamination of the food.

Also, at least 9 water receptacles had green algae growing on the sides and had dirt residue in the bottoms. Water receptacles that are not kept clean can contaminate the water.

All food and water receptacles must be sanitized at least once every 2 weeks, or more often if necessary to prevent the accumulation of dirt, debris, food waste, excreta, and other disease hazards.

Correct by 12 May 2018

Inspection Report

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Bird nests and bird droppings were observed in some of the outdoor dog shelters. Birds can transmit diseases. An effective method of pest control must be established and maintained so as to promote the health and well-being of the dogs and reduce contamination by pests in animal areas. Correct by 17 May 2018

This inspection and exit interview were conducted with facility representatives.
