ANIMALS THAT EDUCATE

Type: ROUTINE INSPECTION
Date: 10-SEP-2015

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A completed written Veterinary Care Program could not be found to review, and the Attending Veterinarian has not visited the premises in a while. There is only one regulated animal, a black bear, so a written Veterinary Care program needs to be completed by the licensee and the attending veterinarian detailing the veterinary care to be provided this bear. To be completed by 10-8-15.

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The feces of the solitary black bear are cow patty consistency. The bear is thin, with slight outlines of the spine and long bones of the legs. From above he is flat sided and has a slight tuck up at the waist. The owner states the only food the bear has been receiving this summer is dog food, and not the additional produce he has fed in the past. The bear has not been dewormed in over a year also. The dog food being fed is of low quality. The bear needs to be seen by the veterinarian and a diagnosis and treatment plan made. The licensee needs to keep records of any veterinary recommendations. To be corrected by 9-25-15.

3.131(a)

SANITATION.

There are at least 13 piles of cow patty type feces in the bears shelter area. Feces needs to be removed on a more regular basis to keep the bear clean and prevent possible disease hazards. To be corrected by 9-12-15.

Exit briefing conducted with licensee.
