Type: ROUTINE INSPECTION
Date: 02-NOV-2023

2.75(b)(1)

Records: Dealers and exhibitors.

There were no records of acquisition or record of animals on hand available at the time of the inspection for the ducks, turkeys, chickens, peacocks, quail, the 3 guinea pigs that are on the premises, and the one new pig and one new rabbit that were acquired since the last inspection.

Per this Section of the Regulations, exhibitors shall make and maintain complete records regarding the details of the acquisition and disposition of animals in their possession in order to account for all animal transfers and the sources of the animals. The Licensee needs to prepare records of acquisition and a record of animals on hand for these birds, guinea pigs, pig, and rabbit and ensure that the animal records are kept current for all future animal acquisitions. Correct by 12/3/23.

2.134(a)

Repeat

Contingency planning.

The Contingency Plan available for review at the time of the inspection was still incomplete. The Licensee used APHIS Form 7093 (USDA/APHIS/Animal Care Contingency Planning Program) to document the Contingency Plan, but the sections of the form were blank where provide the details of the Plan for the situations that trigger implementation of the Plan, the specific tasks/responsible person(s) for the tasks, and the specific resources needed to perform the tasks.

Per this Section, exhibitors must develop, document, and follow an appropriate plan to provide for the humane handling, treatment, transportation, housing, and care of their animals in the event of an emergency or disaster (one which could reasonably be anticipated and expected to be detrimental to the good health and well-being of the animals in their possession) and should have been in place by 7/5/22. The contingency plan requirement ensures that the animals receive proper care during emergency situations.

3.53(a)(4)

Primary enclosures.

Two of the rabbit primary enclosures are comprised of a house/pen placed on top of the ground. There is a panel of coated wire mesh with ~1 ½" by 6" rectangular spacing that covers the dirt floor of each enclosure to prevent the 2 rabbits

Inspection Report

from digging out of their enclosures. The coated wire mesh panel floor in each enclosure is exposed and not covered with dirt/other substrate and poses a risk of injury to the rabbits from entrapment of the digits/feet/leg.

Per this Section, the floors of the primary enclosures shall be constructed so as to protect the rabbits' feet and legs from injury. The Licensee needs to address this item for the health and safety of the rabbits. Correct by 11/8/23.

3.154

Environment enhancement to promote psychological well-being.

Although the birds at the facility were socially housed and were provided with materials to enhance their environment, a written plan for environmental enhancement to promote the psychological well-being of the birds had not been developed and was not available for review at the time of the inspection.

Per this Section, exhibitors must develop, document, and follow a species-appropriate plan for environment enhancement to promote the psychological well-being of birds. The plan must be approved by the Attending Veterinarian and must be in accordance with currently accepted professional standards as cited in appropriate professional journals or reference guides. At a minimum, the plan must address each of the following: social grouping, environmental enrichment, special considerations, restraint devices, and exemptions. The Licensee needs to develop an environmental enrichment plan appropriate for the species of birds maintained and the plan must be approved by the Attending Veterinarian. Correct by 12/3/23.

This inspection and exit interview were conducted with facility representative.
