3.26

FACILITIES, INDOOR.

(b) Ventilation.

During this inspection, the animal room had a strong ammonia odor permeating the air. The air conditioner, which is utilized for this room was not present in its normal location. According to the facility representatives, the air conditioner was removed for cleaning and would be replaced. However, while the air conditioner was out of commission, an alternative method of ventilation should have been provided to help reduce the odor within the room. Indoor housing facilities for guinea pigs or hamsters shall be adequately ventilated to provide for the health and comfort of the animals at all times. Such facilities shall be provided with fresh air either by means of windows, doors, vents, or air conditioning, and shall be ventilated so as to minimize drafts, odors, and moisture condensation.

TO BE CORRECTED BY: SEPTEMBER 25, 2017

This inspection and exit briefing were conducted with the facility representatives.
