

## Inspection Report

---

Montgomery Zoo  
P.O. Box 3313  
Montgomery, AL 36109

Customer ID: **3025**  
Certificate: **64-C-0003**  
Site: 001  
Montgomery Zoo

Type: ROUTINE INSPECTION  
Date: 29-OCT-2024

---

### 3.125(a) Repeat

#### Facilities, general.

A portion of the shifting shoot for two tigers contained areas of flaking black paint and rust. The area was pressure washed to remove some of the paint, however, rust and flaking paint is still present. Failure to maintain housing facilities in good repair can affect the structural integrity of the enclosure which may lead to injury or harm of the animal. Housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals within.

### 3.131(d) Repeat

#### Sanitation.

An insect infestation was located in multiple enclosures throughout the facility.

- Lines of ants were observed trailing along the walls and into enclosures in the lion and cheetah buildings.
- The A6 Barn (Asia/Africa Forest) contained trails of ants that were observed along walls that houses a male bongo, five female bongo, and three Nile lechwe.

Insect pests can cause contamination and disease as well as discomfort to the animals. The facility must establish and maintain a safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests. Correct by maintaining an effective program.

### 3.153(a)(1)(iv) Repeat

#### Primary enclosures.

A wild squirrel and wild starling were observed in the primary enclosure containing the hyacinth macaw. Prevention of wildlife from entering a primary enclosure prevents the transmission of disease, parasites, and pests. Primary enclosures must be constructed and maintained so that they restrict other animals from the entering the enclosure.

This inspection and exit interview were conducted with facility representatives.
