Type: ROUTINE INSPECTION
Date: 09-AUG-2017

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There are two over the counter medication on hand, T-Pro Wound Spray and Vetericyn Plus Antimicrobial gel. There are no instructions for use by the attending veterinarian for these medications.

Each dealer shall have an attending veterinarian. In the case of a part-time veterinarian formal arrangements shall include a written program to address proper methods to control, diagnose and treat disease and injuries.

Have your attending veterinarian write instructions for use and dosage of any medications kept on hand. Improperly used medications can be ineffective in treating disease or cause harm to the dogs.

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There is a female, black lab., with microchip ...94655 with significant hair loss. There is no record of when/if this medical issue was noticed or any communication with the attending veterinarian documented.

Daily observation of all animals to assess their health and well-being; When daily observations are completed by someone other than the attending veterinarian, timely and accurate information on problems of animal health, behavior, and well-being must be communicated to the attending veterinarian promptly and all communication with the attending veterinarian must be documented.

Contact your veterinarian as soon as any problems with health or well-being are noticed in your kennel. All communication must be documented for review and inspection.

To be corrected from now on.

2.50(a)(2) REPEAT

TIME AND METHOD OF IDENTIFICATION.

There are two litters of puppies that are more than 4 months old. These puppies are now housed with other adult

Inspection Report

dogs. These puppies i.d.'s are still being kept on a puppy cage card that is not affixed to the kennel where they reside.

A class "A" dealer shall identify all live dogs and puppies on the premises.

Ensure that all dogs and puppies on the premises have appropriate identification so that they can be traced and tracked in case of disease outbreak.

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

There have been several adult, breeding dogs that have been removed from the facility. These include dogs with microchip numbers ...95386, ...95398, ...14236, ...95392, ...94657. There is no 7006 created to show where these animals went.

Each dealer shall make, keep and maintain records which fully and correctly disclose each dog purchased or otherwise acquired, owned, held, or otherwise in his or her possession or under his or her control, or which is transported, euthanized, sold, or otherwise disposed of by that dealer or exhibitor. The records shall include any offspring born of any animal while in his or her possession or under his or her control.

Records must be made and kept of all animals that come and go from the facility. This is required in the case of disease outbreak so that animals can be traced and tracked from this facility.

To be corrected from now on.

3.1(e) REPEAT

HOUSING FACILITIES, GENERAL.

There is an unopened bag of bedding inside the kennel on the cement floor of the kennel.

Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. The supplies must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies.

Keep all open supplies of food in a container with a lid to prevent contamination by pests and mold.

Inspection Report

3.4(c) REPEAT

OUTDOOR HOUSING FACILITIES.

There are 6 T posts left that are used in several of the primary enclosures that have rust on them.

Building surfaces in contact with animals in outdoor housing facilities must be impervious to moisture.

All surfaces that come into contact with the dogs must be able to be cleaned and sanitized. Rust inhibits the effectiveness of cleaning and sanitizing the posts used in the primary enclosures for the dogs.

3.11(b)(2) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The licensee is using diluted vinegar to sanitize the facility. Diluted vinegar has not been proven to be effective as a sanitizer.

Used primary enclosures and food and water receptacles for dogs and cats must be sanitized at least once every 2 weeks using one of the methods prescribed in paragraph (b)(3) of this section, and more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta, and other disease hazards.

Discuss what sanitizer to use in the kennel with your attending veterinarian. An effective sanitizer reduces the risk of animal disease in the kennel.

The inspection was conducted on August 9, 2017 with the licensee and the exit was conducted on August 11, 2017 with the licensee.
