### Watering.

On April 26, 2025, it was reported that a rhesus macaque went without access to water for two days due to the water hose being improperly connected to its cage. During this time the animal had water rich fruit and vegetable enrichment was consumed, therefore no additional treatment was needed. Lack of potable water in sufficient quantity to nonhuman primates can negatively impact their health and well-being by resulting in dehydration, and possible death. Potable water must be provided in sufficient quantity to every nonhuman primate housed at the facility. If potable water is not continually available to the nonhuman primate, it must be offered to them as often as necessary to ensure their health and well-being.

This inspection and exit interview were conducted with facility representatives.
