Type: ROUTINE INSPECTION
Date: 03-APR-2014

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Sec. 2.40 Attending veterinarian and adequate veterinary care (b)(2)

There was a black female chihuahua ID# 497D565231 that was displaying abnormal behavior. While sitting in an upright position in her enclosure the dog could not maintain her balance. She did not stand and was unresponsive to the licensee. When the licensee removed her from the enclosure the dog had a haunched posture and walked in circles. She remained unresponsive to the actions and voice of the licensee. The dog was previously housed with a male for breeding. Two days ago the licensee noticed the dog having unusual behavior and moved her to an isolated enclosure. The licensee administered 3 baby aspirin to the dog throughout the day on 4/2/14 and one on the morning of 4/3/14. The bottle of baby aspirin was labeled for use in humans. The licensee could not provide the dosage instructions for use of baby aspirin in dogs and it was not listed in her Program of Veterinary Care. This animal is displaying abnormal behavior that may indicate a serious medical condition. The licensee shall obtain a written diagnosis and treatment plan from a licensed veterinarian, as well as provide veterinary care as prescribed. Documentation should be provided during the next inspection.

During the inspection the licensee was instructed that animal would need to be seen by a veterinarian within 24 hours.

TO BE CORRECTED BY :4/4/14

As described above, there was a bottle of baby aspirin which the licensee was administering to dogs. The aspirin was labeled for use in humans. This medication was not listed on the Program of Vet Care or on the list of approved medications for the kennel. The licensee shall seek guidance from the attending veterinarian to identify off label medications that are safe and effective for use in canines. The licensee shall obtain written instructions which include route, dosage and treatment the medications are used for. The bottle should also be labeled with these dosage instructions.

TO BE CORRECTED BY :4/4/14

3.6(a)(2)

PRIMARY ENCLOSURES.

Sec. 3.6 Primary enclosures(a) General requirements. (2) Primary enclosures must be constructed and maintained

Inspection Report

so that they (x)

There were two enclosures that housed un-weaned puppies and their mother that had flooring with 1 inch by 1 inch openings which are large enough that puppies feet can pass through. The licensee provided blankets and in one enclosure a cookie sheet for the puppies to lay on, but, there is nothing to restrict them from moving to the wire flooring. Puppies that are not provided flooring that adequately supports them may not learn to walk properly or may sustain injury. The licensee shall provide enclosures that have flooring that does not allow the animal's feet to pass through any opening of the floor.

TO BE CORRECTED BY: 4/5/14

This inspection and exit briefing was conducted with a facility representative.
