Type: ROUTINE INSPECTION  
Date: 15-JUN-2015

---

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A 16 week old unidentified female Pekinese/Pomeranian mix has an abnormal condition of her left eye. The dog squints the eye and drainage is observed in and around the eye. The current condition of the dog's eye can be painful and can possibly lead to more serious problems such as infection or blindness if left untreated. The licensee, in consultation with the facility's attending veterinarian, must address the eye health of this dog.

A female Pomeranian with tag #117 is observed to have a hard, grayish-brown material on the surface of her front and cheek teeth. The licensee stated that she has consulted the facility veterinarian regarding dental health and has been treating the adult dogs at the kennel with an oral dental medication. However the treatment appears not to be effectively working as the material observed on the teeth of dog #117 is consistent with dental disease. Dental disease can be painful and can lead to other health problems if left untreated. The licensee, in consultation with the facility veterinarian, needs to reevaluate the current dental health plan for this dog and all the dogs at the facility.

### 2.50(a)(1) REPEAT

#### TIME AND METHOD OF IDENTIFICATION.

A 16 week old female Pekinese/Pomeranian mix is not currently identified with official USDA identification. Lack of official identification does not allow for the proper identification or tracking of the animal. Identify the adult dog with official USDA identification.

### 3.1(b)

#### HOUSING FACILITIES, GENERAL.

The primary enclosures in the Quonset hut building are cleaned daily but the soiled bedding materials have not been further removed and have accumulated inside the housing area. Accumulations of soiled bedding can attract pests, create odors and does not facilitate good husbandry practices. Remove soiled bedding materials from inside the housing area as often as necessary to prevent the accumulation of such materials. Correct by June 19, 2015.

### 3.1(c)(1)(1)

## Inspection Report

---

### HOUSING FACILITIES, GENERAL.

Excessive rust is observed to be developing on the metal door flaps in the enclosures of the inside/outside building. The presence of rust can prevent the surfaces from being properly cleaned and sanitized. Eliminate the rust from the metal door flaps. Correct by July 31, 2015.

### 3.1(c)(1)(2) REPEAT

### HOUSING FACILITIES, GENERAL.

Sharp wire points still remain inside the runs of the middle enclosure on the west side of the inside/outside building as well as in the second pen on the east side of the inside/outside building. Sharp points are an injury hazard. Remove the sharp points from inside the runs.

### 3.4(b)(1)

### OUTDOOR HOUSING FACILITIES.

Two enclosures in the Quonset hut building do not have shelter structures. Lack of shelters does not allow the dogs protection and shelter from colder temperatures. Provide shelters in all enclosures located in the Quonset hut building. Correct by June 19, 2015.

Inspection and exit interview conducted with the licensee.

End of report.
