ENVIRONMENTAL RESEARCH CENTER

Type: ROUTINE INSPECTION

Date: 09-JUL-2014

3.125(c)

FACILITIES, GENERAL.

Storage.

There was a bag of animal food material (sunflower seeds) on the counter in the 'mud room' that had evidence that rodents have access to it. There were pencil sized holes in the bag with chew marks and seed hulls around the bag. Facility representatives report that they have seen mice in the building. Vermin access to food materials can contaminate the food and cause disease in study animals. To protect animal health, food materials and bedding supplies must be stored in a manner that protects them against contamination by vermin.

Correct by 7/14/14.

Inspection of animals and facilities conducted on 7/9/14.

Records review and exit interview conducted with Assistant Director on 7/10/14.
