

Inspection Report

Township Of Mt Laurel
1105 Hainesport Mt Laurel Rd
Mt Laurel, NJ 08054

Customer ID: **34249**
Certificate: **22-C-0128**
Site: 001
TOWNSHIP OF MT LAUREL

Type: ROUTINE INSPECTION
Date: 06-FEB-2017

2.8

NOTIFICATION OF CHANGE OF NAME, ADDRESS, CONTROL, OR OWNERSHIP OF BUSINESS.

During this inspection, the animal keepers notified the APHIS officials that the facility is currently managed by an outside company. This change in management was effective January 1, 2017. This facility failed to notify the Regional office about the change of management of P.A.W.S. within 10 days, as required.

A licensee shall promptly notify the AC Regional Director by certified mail of any change in the name, address, management, or substantial control or ownership of his business or operation, or of any additional sites, within 10 days of any change.

TO BE CORRECTED: FEBRUARY 8, 2017

3.81 REPEAT

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

The facility still has a singly housed Bush Baby. The environment has been enriched and the animal is receiving human interaction. However, a written program for environmental enhancement has still not been documented or reviewed by the attending veterinarian. The facility must still document and follow a plan for environmental enhancement to ensure that the Bush Baby is receiving appropriate enrichment for his health and well-being.

During this inspection it was observed that this busy baby was housed adjacent to a large snake in a tank. The sheet that covered the bush baby's enclosure, to block his view of the snake, was on the floor. Snakes are predators and due to his close proximity, the bush baby appeared stressed. The bush baby must be removed from the presence of this large snake for his health and well-being.

Inspection Report

FACILITIES, GENERAL.

Structural Strength.

* The chain-link perimeter fence and enclosure fences have been replaced.

HOWEVER, THE FOLLOWING ITEMS ARE STILL IN NEED OF REMOVAL, REPLACEMENT OR REPAIR:

(CHAPMAN'S PREVIOUS SHELTER BUILDING)

1. The wooden wall on the far side of the shelter building is still rotted at the base. Additionally, the base below this damaged wall has been patched but, the exterior wall above the patch is still rotted. This damage still leaves this side wall and foundation in disrepair.

TWO POT BELLIED PIGS (NOW ONLY HOUSING CHAPMAN THE POT BELLIED PIG)

1. Electric line for the heat lamp is still lying across the ground and not adequately secured. Chapman has access to this line.

SHEEP SHELTER BUILDING (NOW HOUSING TWO POT BELLIED PIGS)

1. The top of the entrance door, on the left, remains severely rotted.

2. There is a fist sized hole in the left, side wall of this building. This damage could have been caused by the new fence installation. This hole must be repaired to keep out the weather and to maintain structural strength.

NEW SHEEP SHELTER (PREVIOUSLY HOUSED THE TWO LARGE GOATS)

1. The wooden entrance ramp has a detached plank at the bottom. Additionally, the base of the ramp is not secure thus leaving the ramp unsound. The detached plank must be secured and the base of the ramp must be adjusted to make it level and structurally sound.

WATER FAUCET ADJACENT TO THE PIG ENCLOSURE

Faucet is still leaking and leaving pooling water on the ground.

Inspection Report

2 LARGE GOATS (NEW ENCLOSURE)

1. The base of the primary enclosure fence, adjacent to the enclosure housing Chapman, has been raised up due to a fallen tree. The root of this tree has lifted the bottom of the enclosure fence fabric thus leaving a gap large enough to allow unwanted animals to enter the enclosure.
2. A large section of wood is still lying in this enclosure, across the raised roots of the fallen tree. The goats have access to this area.
3. The fallen tree is still alive. However, the top of tree is at least one foot away from the top rail of the rear of this primary fence. The tree should be addressed before further damage occurs to the enclosure fences.

Damaged items must be repaired and/or removed and miscellaneous items must be removed from all enclosures to protect the animals from injury and to maintain the entire facility in good repair.

3.131(c) REPEAT

SANITATION.

HOUSEKEEPING. Premises (buildings and grounds) shall be kept clean and in good repair.

The following items still are in need of repair, replacement or removal:

1. The fluorescent light fixture cover still has water stains as well as the same large accumulation of rodent dropping present.
2. There is still a large hole in one window pane on the side of the barn facing the alpaca enclosure. Several shards of glass were again found on the ground inside of the enclosure.

Repairs must be made and damaged items must be removed and/or replaced to protect animals from injury and to maintain the facility in good repair. Soiled items must be cleaned and sanitized for the health of the animals.

3.131(d) REPEAT

SANITATION.

Pest control.

Inspection Report

FEED STORAGE ROOM

Rodent droppings were again observed on the floor around the feed bags and pallets. Additionally, a small pile of spilled pellets and empty bait bags are present in the corner of the room, near the entrance door. Spilled feed still attracts rodents. Spilled feed and rodent droppings must be removed routinely to prevent such accumulations around stored feed. A safe and effective program for the control of insects shall be established and maintained.

NOTES:

* Three additional keepers have been hired now bringing the number up to five.

This facility must have an on going maintenance plan in place to ensure that structural issues are addressed in a timely manner.

This inspection and exit briefing were conducted with the facility representative and the Director of Municipal Services.
