Type: ROUTINE INSPECTION
Date: 05-NOV-2014

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A female Standard Poodle, microchip #010795274, was observed with a heavily matted hair coat on her chest, legs and abdomen. These matts were bound closely to the skin. There are also areas on this dog's chest, legs and abdomen that have clumps of dirt entangled with the hair.

A female Standard Poodle, microchip #010828627, was observed with a heavily matted hair coat on her chest, legs and abdomen. These matts were bound closely to the skin. There are also areas on this dog's chest, legs and abdomen that have clumps of dirt entangled with the hair.

A female Standard Poodle, unable to obtain ID, was observed with a heavily matted hair coat on her chest, legs and abdomen. These matts appear to be bound closely to the skin. There are also areas on this dog's chest, legs and abdomen that have clumps of dirt entangled with the hair.

Matting of the hair coat can be painful, lead to the development of skin infections, and reduces the ability of the coat to insulate the dog. These poodles were identified on the previous inspection report as needing hair coat maintenance performed on them by 12:00pm on October 31, 2014. The follow-up inspection conducted on November 5, 2014 revealed that none of the above stated dogs had received any hair coat maintenance. Licensee must remove the matted hair from these poodles and establish an effective program of hair coat maintenance for all dogs.

The following dogs, cited on October 28, 2014 inspection report under 2.40 (b)(2) DIRECT were examined by a veterinarian and are under treatment:

Male red Pomeranian, microchip #010813009
Male Lhasa Apso, microchip #047348261
Female beagle, microchip #047368034
Female black Labrador retriever, microchip #010860001
Female white Husky, microchip #047351095
Female Cocker Spaniel, microchip #010531612
Female Cocker Spaniel, microchip #021063566
