Type: ROUTINE INSPECTION
Date: 15-APR-2025

3.125(a)

Facilities, general.

In the indoor portion of the facility a female skunk had escaped the skunk enclosure and was found hiding beneath the Opossum enclosure. Animals that escape the safety of their enclosure are at risk of injury or illness. Enclosures must be of sturdy construction, maintained in good repair, and must safely contain the animals.
Corrected at time of inspection.

The Chinchilla enclosure has several exposed sharp points because the animals are chewing the wooden perches. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury.
To be corrected by 4-30-2025.

3.153(a)

Primary enclosures.

The enclosure housing 27 Parakeets and 2 Cockatiel has a wooden back panel that is separated from the wall creating a large open space. A hole is observed in the roof of the enclosure in the back corner near the air vent.
Primary enclosures must be designed and constructed of suitable materials so that they are structurally sound. The primary enclosures must be kept in good repair.
To be corrected by 4-30-2025.

3.158(d)

Cleaning, sanitization, housekeeping, and pest control.

There appears to be a lack of adequate pest control procedures at the facility. Three live mice were observed on the ground along the back side of the Macaw enclosure. The licensee must create and maintain an effective program for the control of pests to promote the health and comfort of the animals.
To be corrected by 4-30-2025

This inspection and exit interview were conducted with a facility representative.
