Type: ROUTINE INSPECTION
Date: 19-JUN-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***There was a female bloodhound named Daisy May (#0A01214630) with discharge surrounding each entire eye. On closer observation the discharge appeared to be green to yellow, thick and mucoid-like. Also, dry crusty green material was observed lining the bottom lid of the right eye. The fur in the corner of each eye appeared dark brown to black with crusty material. According to the licensee, she had noticed this dog's eye condition and it had been present for 2 to 3 weeks. Licensee stated this condition occurs every time this dog whelps. Injuries and infections of the eyes are usually painful and may lead to loss of vision. The condition affecting Daisy's eyes occurred every time she whelps but no contact with a veterinarian had been made prior to this inspection and, therefore, appropriate methods to control or treat this animal's condition have not been implemented.

There was a male sheltie named Blue (microchip number 038568359) has an injury to his face and nose area. The lower portion of his nose and muzzle on the right side has been removed as a result of an accident. The injured edge of the nose and muzzle is no longer adhered to itself and a gap is present. The edges of the gap are rough, thickened and hairless. One area of moist tissue is visible at the front edge of the wound. The licensee reports it happened a long time ago and a re-injury occurred approximately 3 days ago and was due to a fight between the fence. The attending veterinarian had not been contacted and according to the licensee, the veterinarian is on vacation but was scheduled to be on the property in a week. This dog has not been evaluated by the veterinarian at the time of inspection.

These animals must be seen by a licensed veterinarian for a complete physical exam and appropriate treatment administered for these conditions

To be corrected by June 29, 2014.

3.1(a)

HOUSING FACILITIES, GENERAL.

- The outside fence of the some of the large dog enclosures was not structurally sound. Areas of the fence were sagging and leaning into the enclosure where tree limbs had fallen on the fence damaging the top rail. The licensee

Inspection Report

stated this had occurred in the last storm approximately a week prior. These areas must be supported so they are structurally sound.

To be corrected by July 1, 2014.

3.1(c)(1)(2)

HOUSING FACILITIES, GENERAL.

- The chicken wire dividers lining the Yorkshire terriers outside enclosure were not securely fastened and sagging in many areas. In some cases, the wire itself had broken creating sharp points, while in other areas of the enclosures the wire used to attach the divider to the enclosure wall was broken. The loose chicken wire could potentially allow an animal to become injured or entrap a limb between the chicken wire and the enclosure fencing. All structures must be kept in good repair. These chicken wires must be reattached, replaced or removed.

To be corrected by: July 1, 2014.

Inspection and exit interview conducted with facility representative.
