Type: ROUTINE INSPECTION
Date: 23-JUN-2015

2.40(b)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During this inspection there is a total of two indoor kennel buildings. The large building has two housing areas and the other is a trailer type structure. In the western side of the large building there is one female Yorkshire Terrier, chip # 0A01526464 which needs to be groomed. The animal has golf ball size matts of hair and waste material hanging from her anus area. There is also dread lock shaped matts hanging from her back. The animal needs to be groomed and maintained to prevent skin sores and to protect its health and welfare.

Affects one adult Correct by June 25, 2015.

In the trailer type indoor housing building there is one adult black female Shih Tzu, chip # 0A01353231, who needs to be evaluated by the attending veterinarian. The animal has dime size hair loss areas on both ears with sores and drainage. The animal has hair loss areas on its torso and hanging matts on its back, torso and legs. The animal must be evaluated by the attending veterinarian. The dealer must maintain written documentation of the evaluation and all treatment.

Affects one adult. Correct by June 25, 2015

3.1(e)

HOUSING FACILITIES, GENERAL.

In the food storage portion of the large kennel building there is a sealable barrel for open food. The sealed bags of dry food are up off the floor and away from the walls. However there was an open bag of dry food which need to be stored in the sealable container. Through out the room were flying insects which could contaminate the open food. Supplies of food must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. All open supplies of food and bedding must be kept in leakproof containers with tightly fitting lids to prevent contamination and spoilage.

Affects one-hundred fifty-eight adults. Correct by June 25, 2015

Inspection Report

3.6(a)(2)(10)

PRIMARY ENCLOSURES.

In the eastern side of the large kennel building there was one raised wire enclosure which contained one adult and six puppies. The puppies were observed with their feet falling through the wire flooring. The dealer has placed a small piece of carpet on the wire flooring. The carpet does not cover the entire area available to the puppies thus allowing their feet to fall through when they move about. Primary enclosures must be constructed and maintained so that they have floors that are constructed in a manner that protects the dogs' feet and legs from injury, and that, if of mesh or slatted construction, do not allow the dogs' feet to pass through any openings in the floor.

Affects six puppies

Correct by June 29, 2015.

3.11(c) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The kennel facility currently consists of two indoor housing buildings. The large building consists of two animal housing rooms and a separate food storage room. In all rooms of the building the ceiling and door surfaces needs to be cleaned to remove an accumulation of dirt, hair, webs, flying insect nest and dark matter. In the trailer type building there is a work space and sink area that needs to be cleaned to remove the used syringes and dirt. In this area the dealer is storing medications, chemical spray cleaners and cans of insect spray killer. Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to protect the animals from injury, to facilitate husbandry practices and to reduce or eliminate breeding and living areas for rodents and other pests and vermin. The dealer must maintain cleaning of the premises and pest control to protect the health and well-being of the animals.

Affects One hundred fifty-eight adults and forty three puppies.

The inspection and exit briefing was conducted with the facility Representative.
