CHERYL ULLRICH & BILLY JOHNSTON

Type: ROUTINE INSPECTION
Date: 18-JUN-2014

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

****An adult kinkajou in enclosure #25 was injured and not currently receiving veterinary care. It was laying curled in a ball on the floor of the enclosure away from the other kinkajous and did not respond to noise. The animal caretaker touched the animal with a pole and it slowly stood up. The kinkajou had an area on the left side of its chin that had an abrasion and missing hair. The left jaw was significantly swollen and the swelling extended down the left side of the neck. Also the fifth digit of the right front foot was swollen at least twice its normal size and was missing hair. There was an open wound between the fourth and fifth digits. The licensee stated that the chin lesion had been treated earlier by the Attending Veterinarian with instructions to notify him if the animal did not improve. Prior to this inspection, the licensee and the animal caretaker had not noticed the swelling that had developed in the jaw and neck. Therefore, no further veterinary care had been sought despite the worsening condition.

****An adult kinkajou in enclosure #26 was injured and had not received veterinary care. The right front leg was significantly swollen and the kinkajou held that foot tucked under in a flexed position at all times. When she walked and stood, she held that leg in the air and did not bear weight on it. Neither the licensee nor the animal caretaker were aware of the injury.

Untreated medical conditions can worsen and can be painful. The licensee must have these animals examined by a veterinarian BY CLOSE OF BUSINESS ON JUNE 19, 2014. The licensee must keep records of the diagnosis, treatment, and follow-up care and must make these records available to the inspector upon request.

3.132

EMPLOYEES.

The licensee was out of town and had left a single animal caretaker in charge of the animals. The caretaker had only been instructed on how to feed and water the animals. He was not aware that two of the kinkajous were showing any clinical signs of injury. He did not know how to shift the kinkajous out of their resting box so that they could be observed by himself or the inspectors. Therefore, only about half of the animals could be observed during the inspection. Employees who do not have adequate training or supervision can compromise the health and well-being of the animals and the safety of the employees. The licensee must ensure that all employees have

adequate training and supervision to carry out required husbandry practices and care.

TO BE CORRECTED BY JULY 1, 2014.

Because the licensee was out of town, the inspection was conducted with a facility representative assigned by the licensee. The exit briefing was conducted by telephone with the licensee on June 18, 2014.
