Type: ROUTINE INSPECTION
Date: 11-FEB-2014

2.75(b)(1)

RECORDS: DEALERS AND EXHIBITORS.

While reviewing the records it was noted that the following animals: 1 pot belly pig, 2 coatimundis, and 3 prairie dogs, are no longer on the premise. However, there is no documentation present as to whom these animals were sold / donated too. In speaking with Ms. Bardin, over the phone, she did tell me that the Canadian lynx had passed away in Oct 2013. However there was no documentation on the premise at this time. All records need to be kept current and accurate.

WATERING.

The Flemish giant rabbit that is being housed in the warm barn, behind the house, has a dirty water bottle. The bottle has algae present and is green. To ensure that this animal has access to potable water this bottle will need to be addressed.

***To Be Corrected By: February 13, 2014

3.75(c)(1)

HOUSING FACILITIES, GENERAL.

The capuchin is being housed in the warm barn, behind the house. There is a panel of a plastic, white board on one of the walls. However, the edges of this white board have been damaged. The white material is peeling away and now a pressed wood material is present. There are also jagged edges present. This board cannot be cleaned and sanitized in this condition. Therefore, this board will need to be addressed.

Inspection Report

FACILITIES, GENERAL.

1. During this inspection it was noted that the red fox enclosure, adjacent to the parking lot, was in need of repair. This enclosure is up against the wooden stockade perimeter fence. To comply with the perimeter fence requirement chain link fence was strung down the middle of the primary enclosure. However, the fox has been able to gain access to this back section of the pen via a gap in the chain link fencing. Therefore there is a lack of a perimeter fence in this area and the animal has access to jagged chain link fencing. This section of fence will need to be repaired.

***To Be Corrected By: February 15, 2014

2. The African Crested Porcupine is currently being housed in the warm barn behind the house. However, this animal has chewed a section of the wood wall. There is now an ~ 8' gap in the wood wall, along the back, right corner, of its pen. There is a piece of plexi glass, or some sort of plastic, that prevents the animal from escaping this enclosure. However, due to the nature of this animal and the jagged wooden edges around the gap this area will need to be addressed.

3.125(c) REPEAT

FACILITIES, GENERAL.

On the previous inspection (6/24/13) it was noted that the area ("tiki hut") around the freezer was in need of attention. The situation remains this same at this time. The area around the freezer is partially enclosed by walls with countertops. The walls are approximately three feet high. The areas under the countertops, and on the ground, have an accumulation of debris, hay, tools and supplies present. Also noted during this inspection was an issue with other food items not being stored properly. There was an opened bag of dog food sitting directly on the ground, in the snow, adjacent to the "tiki hut". There was also 2 boxes of frozen meat sitting in the sun, on the countertop of the "tiki hut". There was an opened box of vegetables in the warm barn. In the same area of the warm barn there was also a box of empty containers sitting on top of another box of vegetables. All opened bags of food and bedding need to be stored in closed containers. Perishable food items need to be refrigerated. The meat that will be fed out to the large cats needs to be thawed out in a refrigerator.

Food storage areas need to be maintained in such a manner which will minimize contamination. This area needs to be addressed.

3.127(b)

FACILITIES, OUTDOOR.

During this inspection it was noted that the lion and 2 servals were being housed outdoors. They have access to

wooden den boxes that contained some hay. Due to the nature of these animals and the extreme cold weather that this area is experiencing this winter, additional bedding will need to be added to these den boxes. According to the Weather Channel the temperature in the area tonight will be -9 degrees and 13 degrees tomorrow night. To ensure the health and safety of these 3 animals they will need to be provided with more bedding.

***To Be Corrected By: February 13, 2014

3.129(a) DIRECT

FEEDING.

At the time of this inspection it was noted that the male lion and female cougar were extremely thin. Hips and vertebra of both animals were visible. In speaking with the family members, I was informed that the cats were fed daily. However, when I asked to see what would be fed out later today I was shown 2 boxes of meat. These boxes were on the countertop of the tiki hut and frozen solid. The air temperature at ~3:00 pm was ~18 20 degrees. Therefore this food would not have been thawed out before the night feeding. There was no other food source on the premise at the time of this inspection. Due to the condition of these two animals, and the lack of food present, this facility will need to have their attending veterinary visit the facility and evaluate the condition, diets, housing, and care of these animals. The food shall be wholesome and of sufficient quantity and nutritive value to maintain the animals in good health.

***To Be Corrected By: February 13, 2014

3.130 DIRECT REPEAT

WATERING.

On the previous inspection (6/24/13) it was noted that the lion enclosure had a dirty receptacle. During this inspection it was noted that the following enclosures did not have potable water assessable to the animals: the red fox, black bear, lion, red fox / silver fox, and servals. The water receptacles in these pens were frozen solid. The Syrian bear had no water receptacles present. Potable water needs to be provided to the animals on a daily basis.

3.131(c)

SANITATION.

The warm barn, behind the house, is in need of a thorough cleaning. Both sides of the aisles had an accumulation of miscellaneous items: pipes, bowls, sheets of plexi glass, hay, cages, wood, etc., presents. To ensure that this barn can be maintained clean and not harbor any pests, it will need to be cleaned out on a more frequent basis.
