WATERING.

There are accumulations of brown debris around the automatic water valves and on the PVC drain piece below the water receptacles. These accumulations around the water valves and drain pieces exposes the guinea pigs to potential disease hazards such as bacterial, fungi, and parasites. Water receptacles such as automatic water valves and drain lines must be kept clean and sanitized whenever dirty, and sanitized at least once every 2 weeks. Inadequate cleaning and sanitation of the water valves and drain lines can result in contamination of the guinea pigs in the same enclosure and may cause bedding to get wet around the water receptacles. Licensee must establish and maintain a program to keep the water valves and drain pieces clean when dirty, and sanitized and least once every 2 weeks.

Correct by November 19, 2015

An exit briefing was conducted with the licensee.
