Site: 001

HUNT CLUB OF VIRGINIA BEACH  
INC

Type: RE-LICENSE INSPECTION

Date: 20-DEC-2021

---

### 2.131(d)(2)

#### Handling of animals.

No readily identifiable attendant was present during periods of public contact at the petting zoo. For long periods of time there was no attendant monitoring interactions between the public and the animals. According to the facility they have attendants out consistently during busier times but in the cold weather when less people are visiting the attendants are occasionally performing other duties. Without an attendant, the animals may be subjected to unnecessary physical or behavioral stress. Correct by 12/23/21 by ensuring that an easily identifiable attendant is always present during times of public contact for the safety of the animals and the public.

### 3.56(b)(1)

#### Sanitation.

The rabbit enclosures are not being sanitized every 30 days. According to the facility the rabbit enclosures are cleaned out weekly using an apple cider vinegar mixture. They are also pressure-washed approximately twice a year. However, they are not being consistently sanitized every 30 days. Proper sanitization of enclosures is important to minimize disease risks and hazards to the animals. Correct by 12/27/21 by ensuring that all rabbit enclosures are sanitized in accordance with 3.56(b)(3) at least once every 30 days.

## Inspection Report

---

### Facilities, general.

The enclosures housing the goats, sheep, alpacas, llama, and rabbits have areas that are not being maintained in good repair to protect the animals from injury. On the fence line between the cattle enclosure and the enclosure housing some goats, sheep, alpacas, and a llama there are several areas of sharp fence wires where the fencing has been cut. Some of these wires have been bent and created gaps about 4" x 6" which could entrap an animal's leg or hoof. In the goat enclosure there are some sharp nail tips that extend through the side of the run-in shelter and into where the animals have access. There is also metal mesh wrapped around the trunk of a tree that has been torn and twisted, leaving sharp edges. In one rabbit enclosure there is the tip of a screw exposed through the flooring near a back access door. Sharp points in shelters and along fencing housing animals can allow animals to injure themselves. Additionally, gaps in fencing that can allow a leg or limb through can lead to an animal becoming trapped or injured. Correct by 1/15/21 by ensuring that the housing facilities are structurally sound and maintained in good repair to protect the animals from injury.

This is a 1st Relicense Inspection for a Class "C" license. The inspection and exit briefing were conducted with the Applicant.

All items must be in compliance within 2 more inspections or by February 19, 2022, or the Applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Relicense Inspection.

Regulated activity can continue under your existing USDA license until it expires.
