TRANSLATIONAL TESTING AND TRAINING LABORATORIES
387 TECHNOLOGY CIRCLE SUITE 175
ATLANTA, GA 30313

Customer ID: **38366**
Certificate: **57-R-0122**
Site: 002
T3 LABS

Type: ROUTINE INSPECTION
Date: 17-FEB-2022

2.31(d)(8) Critical

Institutional Animal Care and Use Committee (IACUC).

On August 9th 2021, a Yorkshire pig # Y306 was administered a contrast agent during a study related MRI and died soon after. The facility's internal investigation concluded that the most likely cause of death was a severe allergic reaction to the contrast agent. The contrast agent in question was not included in the approved protocol for this study and the Principal Investigator had not submitted an amendment to the IACUC for this change. Without thorough IACUC review and approval of all aspects of study related procedures, safe and judicious use of animals cannot be guaranteed. Proposed activities and proposed significant changes in ongoing activities that have been approved by the IACUC may be subject to further appropriate review and approval by officials of the research facility. However, those officials may not approve an activity involving the care and use of animals if it has not been approved by the IACUC.

This inspection and exit interview were conducted with facility representatives.
