

## Inspection Report

City Of Independence  
811 W. Laurel  
Independence, KS 67301

Customer ID: **4083**  
Certificate: **48-C-0133**  
Site: 001  
City of Independence

Type: ROUTINE INSPECTION  
Date: 29-AUG-2017

### 3.80(a)(2)(ix)

#### PRIMARY ENCLOSURES.

The paint on the wall of the outdoor portion of the Capuchin enclosure is worn off in places leaving exposed concrete with some cracks and rough surfaces. These surfaces in this condition cannot be effectively cleaned and sanitized and therefore can play a role in disease transmission. The licensee must ensure that all surfaces in contact with nonhuman primates are able to be readily cleaned and sanitized in accordance with Sec. 3.84(b)(3) of this subpart, or replaced when worn or soiled. To be corrected by 1 Nov 2017.

### 3.125(a)

#### FACILITIES, GENERAL.

The sliding metal shift door in the bobcat enclosure is rusted and deteriorating to the point that fragments of material from the door are flaking off and collecting on the enclosure floor. This shows that the structure is not being maintained in good repair and suggests that the structural strength of the door or frame may be compromised. The licensee must ensure that the facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals. To be corrected by 1 Nov 2017.

### 3.127(d)

#### FACILITIES, OUTDOOR.

A hole has been dug under the perimeter fence next to the walkway down to the ravine area. The hole appears to be a path used by an animal to enter the facility under then fence. Gaps in the perimeter fence may not restrict animals and unauthorized persons from entering the facility. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. To be corrected by 15 September 2017.

This inspection and exit interview were conducted with facility representatives.
