ANIMAL ADVENTURES OF WESTERN NY INC

Type: ROUTINE INSPECTION
Date: 08-NOV-2017

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A geriatric agouti is laying on its side and is unalert and inactive. The animal appears thin and has regional hair loss on the face, neck and along his legs. The animal has difficulty standing and is uncoordinated when it walks. The owner explained that he has noticed these issues and that the agouti has been having these problems intermittently over the past few weeks. However, the owner said that he has not communicated these issues with the attending veterinarian for guidance on potential veterinary care needed. Changes in the health condition of a geriatric animal should be communicated with the attending veterinarian in a timely manner so that decisions regarding veterinary care for the well-being of that animal may be addressed.

Correct by: November 9, 2017

3.53(a)(1)

PRIMARY ENCLOSURES.

The interior wall of the rabbit enclosure has an exposed nail protruding into the nest box area at the level of the rabbit's eyes, and the wood is chewed in a 12 inch diameter area with loss of paint and an rough surface. These conditions could lead to injury of the animal. This enclosure needs to be structurally sound and maintained in good repair to protect the rabbit from injury.

Correct by: November 16, 2017

3.127(d) REPEAT

FACILITIES, OUTDOOR.

*** The current perimeter fence is still only 4 feet high and is not of sufficient height to keep animals contained if they are out of the primary enclosure. Additionally, a 4 foot high fence does not prevent unauthorized access to the animals. Fences less than 6 feet high for animals must be approved in writing by the Administrator. The perimeter fence needs to be addressed to ensure the safety of the animals.
