DELTA AIRLINES INC

Type: ROUTINE INSPECTION
Date: 11-JUN-2024

3.162(b)(3)

Primary enclosures used to transport live birds.

An adult red-tailed hawk was being shipped from PHL to MSP (Air Waybill # 006 PHL 86542433) in a primary enclosure that had all four sides obscured with two layers of cloth and fabric mesh. The two layers of mesh prevented a carrier from observing the animal without removing said layers of mesh during transportation. The two layers of mesh also prevented the animal from getting proper ventilation. Inadequate ventilation can result in an animal over-heating or experiencing other health risks. The registrant must ensure that any visually obscuring mesh used to provide security for the bird in the enclosure must not interfere with proper ventilation.

This inspection and exit interview were conducted with airline representatives.

Additional Inspectors:

Kira Wagner, VETERINARY MEDICAL OFFICER
