Type: ROUTINE INSPECTION
Date: 15-JAN-2015

3.125(c)

FACILITIES, GENERAL.

In the food storage room, there is a bag of Purina Livestock Dewormer feed supplement that has a hole in the side of the bag. The hole on the bag exposes the dewormer feed supplement contained to be contaminated by pests and rodents, and can cause molding or wetting of the food. The dewormer feed needs to be stored properly to prevent it from molding and wetting from moisture and contamination from pests and rodents.

To be corrected from this day forward.

3.130

WATERING.

Inside the deer enclosure, the watering receptacle in this enclosure has an excess of brown material and dirt covering the inside of the watering receptacle. Dirty water may harbor disease hazards which may pose a health risk for the animals. All water receptacles shall be kept clean and sanitary.

To be corrected from this day forward.

3.131(c)

SANITATION.

Inside the building containing the lemur enclosure, there is a mini-refrigerator that contains the fruit and vegetables for the lemur. Inside of the refrigerator, there is excessive amount of dirt and debris along the inside edges and on the bottom below the fruit and vegetable drawer. On top of the mini-refrigerator, there is an accumulation of old cut up food particles. The licensee informed the inspector that the fruit and vegetables are prepped on top of the mini-refrigerator. Lack of proper husbandry practices in the food preparation area could possibly lead to disease hazards and contamination of the food. Premises shall be kept clean and clear to protect the health of the animals.

To be corrected from this day forward.

Inspection Report

3.131(d)

SANITATION.

Inside of the lemur enclosure, there rat feces around the feeding bowl and inside of the building containing the enclosure. Evidence of rat feces is an indicator of an ineffective pest control program. Rat droppings can harbor disease causing organisms and could cause potential contamination in animal areas. The applicant should ensure an effective pest control program is in place to control pests and reduce potential contamination.

To be corrected by February 14, 2015.

Inspection and exit interview conducted by APHIS personnel with facility representative.
