Site: 001
ADAM YODER

Type: ROUTINE INSPECTION
Date: 15-OCT-2014

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

*** The indoor portion of the sheltered facility needs to be cleaned more often. In the corners and along divider walls there is a buildup of food and other organic wastes. A daily spot-cleaning and sanitization that is done at least every two weeks is necessary to reduce disease hazards. The licensee must ensure that all hard surfaces with which the animals come in contact are spot-cleaned daily and sanitized in accordance with 3.11 b of this subpart to prevent an accumulation of excreta and to reduce disease hazards.

Correct by: 10-17-14

3.6(a)(2)

PRIMARY ENCLOSURES.

*** An outside run for two adult large breed dogs has wire holders that are made with a sharp metal leg protruding into the enclosure. These wire holders must be either removed or repaired to reduce the potential injury hazard to the 2 dogs in this outside run. Outdoor runs on the opposite side of the kennel have wires that are being held by different types of holders that do not have this metal leg. The licensee must remove or repair these sharp metal sections to avoid potential injury to the dogs.

Correct by: 10-22-14

3.11(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

***The outdoor runs for this sheltered facility has large smooth rocks as a substrate. All of these runs have an excessive amount of feces that requires removal. Feces is scattered throughout every run, which contain a maximum of 2 dogs. The licensee must remove this feces and must begin a cleaning schedule to ensure the feces is removed on a regular basis. This is required to reduce disease hazards, odors, and to satisfy accepted husbandry practices.
