Certificate: **48-A-1503**  
Site: 001  
Judy Koehn

Type: ROUTINE INSPECTION  
Date: 07-SEP-2016

### 3.4(c)

#### OUTDOOR HOUSING FACILITIES.

The wooden walls of the outdoor housing facility have a dry, jagged appearance. When asked when these surfaces were last sealed, the facility representative replied last fall. Surfaces that are not impervious to moisture cannot be readily cleaned and sanitized. All surfaces in contact with the dogs must be made impervious to moisture. Correct by 7 Oct. 2016.

### 3.11(b)(2)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The surfaces of two wooden shelters in the whelping building are soiled with a brownish-coating covering a large percentage of the floors and walls.

The sides of three wooden shelters in the outdoor housing facility are soiled from the dogs urinating on them. There is an accumulation of bird feces on the concrete floors in many of the dog runs on the east end of the north set of enclosures.

Surfaces that are not cleaned and sanitized may contribute to an increase in disease transmission as well as can soil and contaminate the dogs in the enclosures. All surfaces must be cleaned and sanitized per paragraph 3.11(b)(3) at least once every two weeks or more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta and other disease hazards. Correct by 14 Sept. 2016.

This inspection and exit interview were conducted with a facility representative.

#### Additional Inspectors

Shaver Margaret, Veterinary Medical Officer
