Hallie Ade
6832 E. Mentor Rd
Gypsum, KS 67448

Customer ID: **12658**
Certificate: **48-A-2111**
Site: 001
Hallie Ade

Type: ROUTINE INSPECTION
Date: 10-NOV-2014

3.1(a) REPEAT

HOUSING FACILITIES, GENERAL.

There is one outdoor enclosure on the east side of the facility housing three dogs with a large hole under the enclosure fence that leaves a gap between the fence and the ground. The hole is under a food receptacle attached to the fence. Holes under fences and structures can cause injury to dogs who try to crawl in the space between the fence and the ground. Holes under fences can also allow dogs to escape the enclosure or other animals to gain access to the enclosure.

There is a tarp hanging into an enclosure on the south side of the sheltered building. The tarp has some shredded edges and is within reach of the dogs. The dogs could chew on the tarp leading to injury and intestinal upset.

There is a broken shelter structure in one of the outdoor enclosures on the north side of the facility. The plastic roof has broken along one side and the shelter is sagging. Some of the plastic that had broken off of the shelter is sticking upright in the sand that has accumulated within the shelter.

The licensee must maintain the facility in good repair to protect the animals from injury and to contain the animals securely.

3.1(c)(2)

HOUSING FACILITIES, GENERAL.

There is a compressed fiber type divider board in an enclosure in the sheltered building housing eight puppies that has split at the bottom exposing material that is not impervious to moisture. There is a divider board in a different enclosure in the sheltered building that has been chipped and chewed at the top, also exposing material that is not impervious to moisture.

There is a shelter structure in the north east most outdoor enclosure with several areas of deteriorating metal. There resulting exposed material is rough and will interfere with cleaning and sanitization of the surface.

Surfaces that are not maintained so that they can be readily cleaned and sanitized can play a role in disease

Inspection Report

transmission. The licensee must ensure that surfaces be maintained on a regular basis. Surfaces of housing facilities--including houses, dens, and other furniture-type fixtures and objects within the facility--that cannot be readily cleaned and sanitized, must be replaced when worn or soiled. To be corrected by 24 November 2014.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

There are at least 2 enclosure in the sheltered facility that have a build-up of grime on the interior hard surfaces. Failure to keep surfaces that come into contact with the dogs can play a role in disease transmission. The licensee must ensure that hard surfaces with which the dogs or cats come in contact must be spot-cleaned daily and sanitized in accordance with Sec. 3.11(b) of this subpart to prevent accumulation of excreta and reduce disease hazards. To be corrected by 11 November 2014.

3.4(b)(3)

OUTDOOR HOUSING FACILITIES.

Two of the outdoor enclosures on the east side of the property are without adequate wind and rain breaks. Failure to provide a barrier from the elements can result in a dog that becomes wet and uncomfortable. In some weather, a dog that does not have a barrier from the elements is unable to maintain a safe body temperature. All dogs must be provided with shelter from the elements which includes wind and rain breaks at the entrance to shelter structures. To be corrected by 13 Nov 2014.

The inspection and exit interview were conducted with the licensee.
