Type: ROUTINE INSPECTION
Date: 03-AUG-2016

3.1(e)

HOUSING FACILITIES, GENERAL.

Bottles & jugs of soaps & bleach were being stored in the dog/cat barn area in close proximity to the animal enclosures. The bags of feed are being stored in an area accessible to barn cats who were observed next to the bags of feed during the inspection. Other bottles of soaps were observed on the counter/sink area in the small air conditioned food prep room.

These storage practices do not minimize contamination of the feed by these chemicals or the cat(s), and also poses a risk of ingestion by the animal if these chemicals should spill out of their containers and get into the enclosures or the animal feed/bedding

Storage of food must be stored in a manner that protects it from contamination. Substances that are know to be toxic to the dogs or cats, but are required for the normal husbandry practices must not be stored in food storage and preparation areas, but may be stored in cabinets in the animal or prep areas.

Correct by August 6, 2016

3.6(a)(2)

PRIMARY ENCLOSURES.

"Scooter" has been chewing/scratching the lower painted horizontal pieces of wood in two of the outdoor portions of his sheltered housing that he has been in. This has created removal of the paint & splintering of this wood which could potentially injure "Scooter" as he further works on these structures, or any other dog that might be placed in either of these runs.

Enclosures must be maintained so that they have no sharp points or edges that could injure the dogs and protect them from injury.

Inspection Report

3.127

FACILITIES, OUTDOOR.

The camel enclosure only has one shelter structure which would accommodate 2 of the 4 adult camels. This shelter structure is not large enough to allow all 4 camels to make normal postural adjustments (stand up, lie down & turn around) if they were to seek shelter from the elements (sun, & rain) at the same time.

Additional shelter shall be provide so that all of the camels can be protected from the elements at the same time while maintaining normal postural adjustments within.

Correct by August 31, 2016

This inspection report could not be completed on-site and will be E mailed to the facility manager

The exit interview was conducted on-site with the facility manager
