### 3.125(a)

#### Facilities, general.

The fencing for two of the camel enclosures is in need of repair. The fencing of the enclosure by the large barn has an approximately 12 foot section adjacent to the gate and extending toward a smaller barn structure that consists of rusting loose metal fencing wire with a string of barbed wire on top that the camels have pushed down by leaning on it. The fencing of the enclosure immediately behind the house has a gate that is only about 4 ft high and a loose short section of rusted wire fencing adjacent to it. The facility has purchased a new gate for this area but has not had it put in place. Fencing in need of repair may lead to injury of the camels, escape of the camels in the enclosure or entry of other animals into the enclosure. Outdoor housing facilities including all fencing and gates shall be structurally sound and shall be maintained in good repair. Correct by 12/8/24.

This inspection and exit interview were conducted with the licensee.
