LUCKY LADD FARMS

Type: ROUTINE INSPECTION

Date: 15-AUG-2024

3.130

Watering.

The water receptacles for the capybara, raccoons and foxes are in need of cleaning. These species have only one source of drinking water in their enclosure which consists of a large pool of water. No separate potable drinking water sources are present. The pool of water for the capybara had fecal material and dirt in the bottom of it and the water was murky. Capybara naturally choose to defecate in water. The pool in the raccoon enclosure had green algae material growing on the sides and bottom and the water was murky. The water in the pool for the foxes appeared clear but had dirt in it. The pools of water in these enclosures appear to be used by the animals for bathing, cooling down and defecating. These actions can lead to contamination of the water which then may no longer be potable or may acquire a taste that keeps the animals from drinking it.

All water receptacles used to provide drinking/potable water must be kept clean and sanitary. Correct by 8/17/24.

3.131(a)

Sanitation.

The barn in the large enclosure housing sheep, goats, llama and pigs is in need of cleaning. The shavings on the floor of the inside of the barn and under the roofed 'porch' area are uniformly mixed through with fecal material throughout. The animals resting in the barn cannot avoid contact with the dirty shavings. Excreta should be removed regularly to prevent contamination of the animals, spread of disease and odors.

Correct by 8/20/24.

3.131(c)

Sanitation.

The room being used to store and prepare food, store enrichment items and other miscellaneous items such as towels is in need of cleaning. There is dust on most surfaces along with cobwebs on some of the items on the upper shelves. The counters are dirty with emptied food bags on it. The full trash can has no lid and has a number of flies buzzing around it. Items on the shelves and some on the floor are stacked haphazardly and with overcrowding making it difficult to keep the areas clean and pest free. Dirty towels in an open hamper has flies buzzing around it. The fly strips are full and need to be replaced. The premises including the buildings need to be kept clean and organized in order to facilitate the required cleaning, to prevent odors/pests/spread of disease and to reduce the risk of contamination of the feed. The premises
