Site: 001  
CLASSY CREATIONS

Type: ROUTINE INSPECTION  
Date: 10-AUG-2017

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

\*\*\* There were expired drugs found above the grooming area in the main kennel which included Tylan lot # 60430A exp 7/07 and GentaMax lot # 130101 exp 2/15. Expired drugs should be removed by expiration date so they are not accidentally used as there is concern to the effectiveness of the drugs that have expired. This needs to be addressed for the safety of the dogs.

\*\*\* The facility had transferred two supplements (wheat germ oil and vitamins) into smaller bottles for distribution to the dogs, but the smaller bottles were not labeled to clearly identify what was in them. It is important that when transferring to unlabeled containers that they are labeled correctly with the product information including date of expiration for the safety of the dogs.

\*\*\* Several of the dogs had inter digital cysts that the licensee stated her husband was treating with a medicated spray, including a pug #43. There was nothing written down that the dogs were being treated and no treatment plan was written in detail by the attending vet. As these dogs are on wire and prone to inter digital cysts a treatment plan should be documented for these common issues for the health and comfort of the dogs.

### 3.1(a)

#### HOUSING FACILITIES, GENERAL.

\*\*\* The outdoor enclosure has two sections of wire that are draped over the sides to keep dogs from jumping out of the enclosure. The wire on the sides of the chain link are not secured to the fence so there are sharp wires protruding into the enclosure. These sharp points could be a potential hazard to the dogs and need to be addressed for safety of the animals.

\*\*\* The same outdoor enclosure has several sections of fencing on the front panel by the door that is rusted and starting to flake off. These sections of the enclosure need to be addressed and rust removed to keep the enclosure structurally sound and able to be cleaned.

\*\*\* The sheltered building has sections of thick plastic covering the wire flooring at the doors and along the middle

## Inspection Report

---

over the pvc center pipe to facilitate cleaning. Some of the plastic is chewed to the point it can not longer be cleaned and is coming up off the floor. These sections of plastic need to be addressed to keep the enclosures in good repair.

\*\*\* One of the swing doors of the sheltered building that gives access between the indoor and outdoor run needs to be addressed. The door is broken and the frame on the outside has sections of metal that is coming off the building and the hinges are rusted. This frame needs to be maintained in good repair for the safety of the dogs.

\*\*\* Some of the plastic lining underneath the whelping enclosures is broken and separating from the wall which is leaving the wood behind the plastic previous to moisture. The area underneath the whelping boxes must be maintained in good repair to facilitate cleaning of the area.

Correct by: Sept 21, 2017

### 3.1(b)

#### HOUSING FACILITIES, GENERAL.

\*\*\* The food and bedding storage area needs to be de cluttered and cleaned. There are dirty whelping boxes that are being stored in the room with evidence of feces still in the box, there are trash items (empty food bags) miscellaneous items (crates, barrels) also throughout the area. The window ledge has an accumulation of dead flies and there was mice droppings on the floor. In addition there was a large wheel barrow that is used for mixing food and supplements for the dogs that has not been cleaned. Areas used for storing animal food or bedding must be free of any accumulation of trash, and other discarded materials. This area needs to be cleaned and organized to keep the food free from contamination and for the health of the dogs.

Correct by: Aug 17, 2017

### 3.11(a) REPEAT

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\*\*\* The area underneath the outdoor wire mesh enclosures has an accumulation of feces up along the back wall of the building that is not being removed on a routine basis. The area was recently scraped down but the rake does not reach as far as the back wall. This needs to be addressed so the entire area underneath the wire mesh enclosures can be sufficiently cleaned.

\*\*\* The same feeder in the sheltered building was again filled with feces and the food was not able to get into the main trough area due to the accumulation. As this dog is known to poop in the feeder this feeder should be checked daily so feces is removed and the dog has access to clean food.

## Inspection Report

---

Fecal and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs and to reduce disease hazards, insects, pests and odors. These enclosures need to be cleaned for the health and comfort of the dogs.

### 3.11(b)(2) REPEAT

#### **CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.**

\*\*\* The facility is not being sanitized on a routine basis. There is still a buildup of dirt, debris and hair throughout the enclosures and underneath the enclosures. This excess hair can trap urine and fecal debris causing strong odors throughout the kennel. The fans over the enclosures are very dirty with hair and debris throughout the fan and these need to be cleaned as well.

\*\*\* The sheltered building has not been sanitized since the last inspection according to the licensee. This building was reported on the last inspection as not having been sanitized, hence this building has not been cleaned in multiple months. There is an accumulation of hair on the tops of the enclosures and in corners. There is fecal material and grime caught between the black plastic on the wire mesh floor. Underneath the enclosures are large buckets that collect excess water from the automatic drinkers. These buckets are filled to the top with water also containing bugs, fecal material and debris. The water serves as a breeding ground for pests and bacteria and need to be dumped and cleaned on a frequent basis.

For the health of the dogs, primary enclosures must be sanitized at least once every 2 weeks. This needs to be addressed and the corrective action may include creating a schedule and following through with a cleaning routine.

### 3.11(c) REPEAT

#### **CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.**

\*\*\* To the right of the outdoor enclosure housing the large breed dogs, there is still trash and debris items and miscellaneous items with an overgrowth of weeds. Weeds must be controlled so as to facilitate cleaning of the premises and pest control, and to protect the health and well-being of the animals. This area currently promotes a breeding and living ground for pests and vermin.

Animal areas must be kept clean and in good repair to protect the animals from injury, and to promote good housekeeping practices.

### 3.12 REPEAT

#### **EMPLOYEES.**

---

## Inspection Report

---

\*\*\* The facility currently does not have enough trained employees to carry out an acceptable level of husbandry practices and care required for these dogs. The licensee's state that they expect their children to do a certain amount of work and care for the dogs. One owner works in the kennel in the morning prior to going to his job and the other owner has not had the ability to be in the kennel as much as needed to supervise the care of the dogs. The facility states they they hired an employee to come in one day a week, but that employee has not been able to come the past two weeks. Based on the number of non compliant items in the report it is evident that the facility needs to hire additional staff or reduce numbers of animals. This needs to be addressed to maintain an acceptable level of husbandry and care for the dogs.

This inspection was conducted with the licensee. Throughout the inspection, the non compliant items listed on the report were identified and discussed. When the inspectors went back to identify what would be on the final report, the licensee sent her children out to inform the inspectors that the licensee would not be coming back out and she was "done talking for the day." The inspectors reviewed what would be on the final report and left the property,
