Customer ID: **327740**  
Certificate: **35-A-0363**  
Site: 001  
AARON GLICK

Type: ROUTINE INSPECTION  
Date: 04-MAR-2015

---

### 3.53(a)(1) REPEAT

#### PRIMARY ENCLOSURES.

At least two enclosures had wire points and loose wire mesh that the rabbits could come into contact with. Loose mesh and wire points could possibly injure the rabbits. Surfaces that rabbits come into contact with must be maintained in good repair to protect the rabbits from possible injury.

### 3.53(c)(2) REPEAT

#### PRIMARY ENCLOSURES.

Six enclosures were over-crowded with rabbits. Each rabbit in these six enclosures was estimated to weigh less than 4.4 lbs. Weaned rabbits that weigh less than 4.4 lbs are required to have a minimum of 1.5 square feet of floor space per rabbit

--Five enclosures were measured to have 5.8 square feet of floor space, which provides the minimum floor space for 3 weaned rabbits that each weigh less than 4.4 lbs. Two of these enclosures contained 4 rabbits, two enclosures had 5 rabbits, and one enclosure contained 6 rabbits.

--Another enclosure was measured to have 8.3 square feet of floor space, which provides the minimum floor space for 5 weaned rabbits that each weigh less than 4.4 lbs. This enclosure contained 7 rabbits.

Over-crowding animals can cause them to get sick easier and does not provide for their wellbeing. To protect animal health and provide for their wellbeing, rabbits must be provided at least the minimum amount of floor space.

### 3.56(a) REPEAT

#### SANITATION.

At least six rabbit enclosures were observed to have excessive build-up of excreta (feces and feed) in the corners. Excessive build-up of excreta can cause rabbits to get sick and does not provide for their wellbeing. Routinely clean rabbit enclosures to prevent a build-up of excreta.
