Christmas, FL 32709

Customer ID: **3094**

Certificate: **58-C-1048**

Site: 001

JUNGLE ADVENTURES INC

Type: ROUTINE INSPECTION

Date: 14-DEC-2016

### 2.131(c)(1)

#### HANDLING OF ANIMALS.

There is a large space between the barrier fence entrance door and the rest of the fence. Even though the door was locked with a padlock, the latch combined with the gap, had sufficient play allowing this entrance door to easily open. This then would permit direct public access to the serval enclosure.

The barrier fence shall be maintained to prevent public contact with the animals to assure the safety of both the animals and the public.

Correct by December 16, 2016

### 3.6(a)(2)(iv)

#### PRIMARY ENCLOSURES.

There were many vultures inside the wolf hybrid exhibit. This exhibit is open top and these birds have free access in and out of the exhibit.

These vultures are predatory birds which pose a risk of disease to this animal, They also can & do compete for their food, dirty the enclosure with their droppings, and can harass the wolf hybrid.

The enclosure shall keep unwanted animals from entering.

Correct by January 15, 2017

### 3.131(d)

#### SANITATION.

The deer exhibit is covered with plastic mesh pieces which are intended to prevent the vultures from entering. During the inspection there were many vultures that were observed inside (and around) the exhibit.

Upon further inspection, it was noticed that there were holes within this material either due to the birds picking at it,

## Inspection Report

---

deterioration from exposure to sunlight/UV, or that the mesh became detached from its adjacent piece. This now has created gaps where the vultures can easily gain access into the exhibit and is no longer effective in keeping these birds out.

These vultures are predatory birds which pose a risk of disease to the deer. They also can & do compete for their food, dirty their enclosure with their droppings, and can harass the deer.

This plastic mesh shall either be repaired or replaced with another material that can better withstand the elements (as well as the birds) as discussed during the inspection.

Correct by January 15, 2015

This inspection and exit interview were conducted on-site with the Assistant Animal Care Manager. This inspection report will be E mailed to the Animal Care & Medical Director.
