TAMMY CLOSSER

Type: ROUTINE INSPECTION
Date: 03-OCT-2017

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Inside the whelping building the first enclosure, containing one adult female and nine puppies, has an excessive number of flies located on the puppies, on the dog food and on the enclosure walls. The second enclosure, containing one adult female, has a wasp nest next to the access door. At the time of the inspection there are no methods in place for the control of flies and wasps. The flies could cause contamination of the food source and contact with wasps could have a negative impact on the health of the adult dogs and puppies.

An effective program for the control of insects, external parasites affecting dogs, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas. The licensee must establish effective methods for controlling flies and wasps in order to support the health and well-being of the dogs.

To be corrected by: October 10, 2017

Inspection and exit interview conducted with Kelly Maxwell, ACI and the facility representative.
