Morrison, TN 37357

Customer ID: 22612
Certificate: 63-C-0160
Site: 003
PARTY ANIMALS INC

Type: ROUTINE INSPECTION
Date: 15-AUG-2017

3.125(a)

FACILITIES, GENERAL.

*The fencing on side of the exhibit sheep and goats alongside the drive is loose. It needs to be tightened and grounded to prevent the animals from injuring themselves.

*The young scimitar horned oryx was in the walkway of the barn attached with a rope and harness to the enclosure fence of the alpaca enclosure. The oryx may injure itself or get tangled in the rope when left unattended. In addition, if spooked he is strong enough to potentially pull down the alpaca enclosure fencing. The current panel fencing enclosure used to house the oryx at night is no longer tall enough or strong enough to safely keep the maturing oryx contained. The facility must construct a housing enclosure for the oryx that is structurally sound and will protect the oryx from injury and contain him. Correct by 8/20/17.

3.130

WATERING.

The water receptacles for multiple species including the African Crested porcupine, sheep and goats are in need of cleaning. There is green algae type growth on the sides of the receptacles and dirty, opaque water with vegetative debris in the receptacles. Clean potable water needs to be provided for the animals to ensure their well-being. All water receptacles shall be kept clean and sanitary. Correct by 8/16/17.

3.131(c)

SANITATION.

The barn and the enclosures near the barn are in need of housekeeping.

*All accumulations of trash, old feed receptacles with food excreta/mold and stored non-husbandry related materials shall be removed from the direct animal areas and cleared regularly to prevent odors and breeding places for pests/vermin.

*Weeds (1.5 to 2.5 ft tall) in the goat/sheep enclosures and zebu/water buffalo/highlander enclosure need to be trimmed/removed to allow the animals to enter their shelter structures, to be able to clean regularly and to prevent areas where pests/parasites may live.
