

Inspection Report

Austin Aquarium LLC
13530 N. Hwy 183 #101
Austin, TX 78750

Customer ID: **331570**
Certificate: **74-C-1084**
Site: 001
AUSTIN AQUARIUM

Type: ROUTINE INSPECTION
Date: 13-SEP-2018

2.131(c)(1)

HANDLING OF ANIMALS.

There are gaps in the chicken wire which serves as the barrier fence for the enclosure housing the 2 coati . These animals are very inquisitive, active and readily approach any area of the enclosure next to where the public is standing . The gaps in the chicken wire would allow someone to reach thru to the animals. A barrier that would prevent any contact with these animals is necessary to assure the safety of the animals and the public. CORRECT BY : 9/20/18

3.77(g)

SHELTERED HOUSING FACILITIES.

There is no public barrier in front of the red ruffed lemur enclosure this date. The barrier for the ring tailed lemurs consists of a bamboo fence with a top and bottom rail. There is a large enough space between and under the rails that would allow a small child to slip thru the fence and possibly contact the animals. A barrier must be present between the primary enclosure and the public at any time the public is present, that restricts physical contact between the public and the nonhuman primates. CORRECT BY : 9/20/18

3.125(a)

FACILITIES, GENERAL.

There is a metal hook on a board at the top of the enclosure housing the 2 coati . An animal could be caught or entangled by this open hook. The hook must be removed or repaired so there is no danger of animal injury. CORRECT BY : 9/14/18

3.131(c)

SANITATION.

There is black debris along the wall molding and on the walls and door frame in the room housing the enclosure for the 2 kinkajous . There is a space at the bottom of the wallboard in corner of the room that may be a hiding area for pests .The kinkajous are allowed access to the entire room. The room must be kept in good repair to prevent injury and to facilitate husbandry practices such as cleaning . CORRECT BY : 10/13/18
