Type: FOCUSED INSPECTION
Date: 23-SEP-2016

2.31(c)(7)

INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

A significant changes was made to an activity using a regulated species without Institutional Animal Care and Use Committee (IACUC) approval.

Ewes and fetuses had organs collected under deep anesthesia and died due to exsanguination rather than the administration of a barbiturate euthanasia solution prior to organ collection as specified in the protocol approved by the IACUC. As the animals were deeply anesthetized, the affected animals should not have experienced pain or distress.

IACUC subsequently approved a protocol amendment that described the procedures used and that was submitted by the principal investigator prior to the inspection.

Significant changes in the care and use of animals in ongoing activities may adversely affect animal well-being. The IACUC should review proposed significant changes to activities involving animals prior to the implementation of the activities.

Corrected prior to inspection.

This inspection and exit briefing were conducted with a Facility Representative.

Additional Inspectors

Andricos Alexandra, Veterinary Medical Officer

Prepared By: MICHAEL SCHNELL, D V M USDA, APHIS, Animal Care
