### Primary enclosures.

While reviewing the inventory, a discussion with facility representatives revealed two six-year-old, male Mandarin ducks (ID numbers: 10855 and 10856) died due to what the facility representatives assumed was predation (due to the nature of the findings regarding the birds). On October 21, 2024, during morning rounds, the deceased animals were found in their fully enclosed off-exhibit holding areas with chew marks on them. It was noted that the keeper door – the entrance to their holding area - had a very small hole/gap in the dirt underneath it. Primary enclosures that do not prevent other animals from entering the enclosure subject the animals to possible harm/injury which could negatively impact the health and well-being of the animals maintained. Primary enclosures must be constructed and maintained so that they restrict other animals from entering the enclosure. The corrective action the facility immediately implemented was a concrete threshold/trench underneath the keep door to prevent tunneling/digging into the holding area.

Corrected prior to inspection on October 21, 2024

This inspection and exit interview were conducted with facility representatives.
