Type: ROUTINE INSPECTION
Date: 16-JUL-2015

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

No copy of the program of veterinary care was made available at the time of inspection. The program of veterinary care must be developed in accordance with the attending veterinarian recommendations to ensure the animals are receiving adequate veterinary care. There are also no recorded site visits to the facility by the attending veterinarian. Good communication and consultation between the licensee and the attending veterinarian in the form of a written program of veterinary care and regularly scheduled visits to the premise are necessary to ensure adequate veterinary care at the facility. The licensee shall employ an attending veterinarian under formal arrangements and must schedule regular visits to the premises.

To be corrected by: July 27, 2015.

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A white adult female pot-bellied pig with no identification, has fly bites on the tip of both ears. Each ear has an open sore that is approximately one quarter inch in size. The sores are moist and bright red in color. Numerous flies are present on the affected areas of both ears. The facility representative was not aware of the wounds but applied "Corona " (a topical ointment containing 30% lanolin) to the pig's ears after the fly bites were identified by the inspector. Fly bites to the ears can be painful and cause discomfort for the pig. Fly bites to the ears can lead to open sores which can cause further disease risk or infection for the animal. It can also lead the ear being inflamed. Left untreated it could delay the healing process affecting the health and well being of the animal. Fly bite ears need to receive veterinarian care to prevent further biting and then the ears can start to heal. The licensee must have this animal examined by a veterinarian and administer an appropriate treatment plan. The outcome of this exam must be documented and provided to the inspector upon request. The licensee must ensure that all animals receive adequate veterinary care at all times.

To be corrected by: July 22, 2015.

Inspection Report

3.53(a)(1)

PRIMARY ENCLOSURES.

An outdoor enclosure containing one tan and gray colored rabbit has at least seven sharp wire points protruding from fencing along the side of the enclosure. The wire points are facing towards the inside of the enclosure and are approximately 1.5 inches in length. They are located near the flooring where the rabbit can come in contact with them. The sharp points can potentially injure the rabbit causing pain of discomfort. The licensee must repair or replace the wire to ensure the safety or health of the rabbit.

To be corrected by: July 23, 2015.

Exit briefing conducted with facility representative.
